Personal Profile

I am a person with not allot of social life I mostly study and work during my free time because I tend to spend my own money I worked with the family business since I was a young boy and once my family opened their last business I was working and studying and doing long shifts whenever I have free time. I also like using commuters and keeping up to date with technology and like using different software and I have a very good understanding of software and hardware. Also as part of my course I have looked at many different topic areas such health and safety in a working environment and I have used many different software's to complete these tasks that were assigned as part of my course. I have the potentiality to finish a work, which has been given to me as quick as possible because a person with a lot of free time doesn't know how to spend their free time so I tend to work during my free time and earn money so I could spend my own money and buy what I need by my self or save up for my education for example university or masters.
